Sample Intermediate Accounting Final Exam Questions and Answers

Below, we provide examples of typical exam questions along with detailed answers to help you prepare effectively.

Question 1: Revenue Recognition

Question:

Company A enters into a contract to sell goods to Customer B for \$50,000. The goods are shipped on January 15, and ownership transfers at that time. Payment is due within 30 days. How should Company A recognize revenue in its financial statements?

Answer:

According to the revenue recognition principles under ASC 606, revenue should be recognized when control of the goods transfers to the customer. Since ownership transfers at shipment on January 15, and the company has satisfied its performance obligation, Company A should recognize the \$50,000 revenue on January 15.

Key points:

- Revenue recognized when control passes.

- Shipment date is the transfer point.
- Payment terms do not affect recognition timing unless they impact control transfer.

Question 2: Inventory Valuation

Question:

A company uses the FIFO method. Beginning inventory is 1,000 units at \$10 each. During the period, it purchases 2,000 units at \$12 each. Ending inventory is 1,500 units. What is the value of ending inventory?

Answer:

Using FIFO (First-In, First-Out), the oldest inventory is sold first, so ending inventory consists of the most recent purchases.

Calculation:

- Total units available: $1,000 + 2,000 = 3,000$ units
- Ending inventory: 1,500 units

Cost of ending inventory:

- 1,500 units at \$12 (latest purchase) = $1,500 \times \$12 = \$18,000$

Therefore, ending inventory is valued at \$18,000.

Question 3: Lease Accounting

Question:

Lessee Company enters into a 5-year lease for equipment with annual payments of \$10,000. The interest rate implicit in the lease is 5%. How should the company record the lease at inception?

Answer:

Under ASC 842, the lessee recognizes a right-of-use asset and a lease liability at the present value of lease payments.

Steps:

- Calculate the present value of \$10,000 annual payments over 5 years at 5%.
- Use the present value of an ordinary annuity formula or table.

Calculation:

$$PV = \$10,000 \text{ PVIFA } (5\%, 5 \text{ years})$$

$$\text{PVIFA } (5\%, 5) = 4.3295$$

$$PV = \$10,000 \times 4.3295 = \$43,295$$

Entry at inception:

- Debit Right-of-Use Asset: \$43,295
- Credit Lease Liability: \$43,295

This initial measurement reflects the obligation and the asset recognized on the balance sheet.
