Energy is the ability to do work or cause change. It is an invisible force that powers everything around us. From the movement of the planets to the functioning of our bodies, energy is at the heart of all physical processes.

Types of Energy

Energy exists in many forms, and understanding these forms helps students recognize how energy is involved in everyday activities. The main types include:

- **Kinetic Energy:** The energy of moving objects. For example, a rolling ball or flowing water.
- **Potential Energy:** Stored energy based on position or condition. For instance, a stretched rubber band or a parked car at the top of a hill.
- **Thermal Energy:** The energy of heat. Boiling water or a warm hand are examples.
- **Light Energy:** Energy from the sun or a flashlight.
- **Sound Energy:** The energy carried by sound waves, like music or a ringing bell.
- **Electrical Energy:** Energy caused by electric charges, such as in a lamp or a computer.
