Problem:

A pizza shop sells a fixed base fee plus a cost per slice. If the total cost (C) for (n) slices is modeled by $(C = 10 + 2n)$, find the total cost for 5 slices and interpret the components of the expression.

Answer Key Highlights:

- For $(n = 5)$:

$$(C = 10 + 2 \times 5 = 10 + 10 = \$20)$$

- The fixed base fee is \$10 (the constant term).
- The variable cost per slice is \$2 (the coefficient of (n)).
- Interpretation: The total cost combines a fixed setup fee with a variable cost depending on the number of slices.

Activity 2: Solving Linear Equations through Inquiry**Problem:**

Find the value of (x) that satisfies $(3x + 4 = 19)$. Explore alternative methods to solve the equation.

Answer Key Highlights:

- Standard method:

$$(3x + 4 = 19)$$

Subtract 4 from both sides: $(3x = 15)$

Divide both sides by 3: $(x = 5)$

- Alternative approach:

Recognize that $(3x)$ must be (15) , so $(x = 5)$.

- Recognizing equivalent expressions via properties like commutative, associative, and distributive laws.

Example:

If students investigate simplifying $3(x + 4)$, the answer key emphasizes understanding the distributive property:

$\{$

$$3(x + 4) = 3x + 12$$

$\}$

The key explanation illustrates multiple approaches, such as expanding first or substituting values for x to verify equivalence.

2. Solving Equations Through Inquiry

The investigative approach encourages students to explore multiple pathways to solving equations:

- Isolating the variable: Using inverse operations.
- Balancing methods: Maintaining equality by performing the same operation on both sides.
- Graphical interpretations: Visualizing solutions as intersections in coordinate planes.

Answer key insights:

The solutions are often accompanied by prompting questions like:

- "What happens if you add the same number to both sides?"
- "Can you verify your solution by substitution?"

This approach helps students see equations as balanced statements rather than mere procedures.

3. Recognizing and Applying Patterns

Patterns are central to algebraic thinking. The answer key emphasizes discovering patterns such as:

- Recognizing the structure of sequences.
- Understanding the pattern in the expansion of binomials.
- Generalizing patterns to formulate formulas.

Example:

When exploring the expansion of $(a + b)^2$, students may notice:

$\backslash$

$$(a + b)^2 = a^2 + 2ab + b^2$$

$\backslash$

The answer key guides students through discovering this pattern through expansion exercises, prompting them to verify with specific values and then generalize.

4. Investigating Functions and Relationships

The answer key demonstrates how students can explore relationships between variables, such as:

- Plotting points to identify function behavior.
- Investigating linear functions by examining slopes and intercepts.
- Exploring nonlinear functions like quadratics.

Key activities include:

- Creating tables of values.
- Graphing to observe patterns.
- Reasoning about how changing parameters affects the graph.

Strategies Facilitated by the Answer Key for Effective Learning

Encouraging Multiple Solution Paths

The answer key showcases various methods to solve a problem, promoting flexibility. For example, in solving an algebraic equation:

\[

$$2x + 3 = 7$$

\]

Students might:

- Subtract 3 from both sides, then divide by 2.
- Graph the functions $y = 2x + 3$ and $y = 7$ to find the intersection point.

The key highlights these approaches and discusses their advantages, fostering adaptable problem-solving skills.

Promoting Conceptual Understanding Over Rote Memorization

The answer key emphasizes the reasoning behind steps, not just the steps themselves. For

instance:

- Explaining why the distributive property works.
- Clarifying the meaning of solving for a variable.
- Demonstrating the connection between algebraic and graphical representations.

Providing Scaffolded Guidance

The detailed solutions often include hints, leading questions, and reflective prompts to support learners at various levels:

- For beginners: "What operation can you do to both sides to isolate x ?"
- For advanced learners: "Can you think of an alternative method to verify your solution?"

This scaffolding encourages independent inquiry and critical thinking.
